

# DANESHVAR AMROLLAHI

✉ [daneshvar@cs.stanford.edu](mailto:daneshvar@cs.stanford.edu)  [daneshvar-amrollahi.github.io](https://github.com/daneshvar-amrollahi)  [github.com/daneshvar-amrollahi](https://github.com/daneshvar-amrollahi)

## EDUCATION

- **Stanford University** 2024/01 - 2030/01 (Expected)  
PhD in Computer Science
- **University of Tehran** 2018/09 - 2023/02  
BSc in Computer Engineering GPA: 18.02/20.00

## PUBLICATIONS

- D. Amrollahi, E. Bartocci, G. Kenison, L. Kovács, M. Moosbrugger, M. Stankovič (2022). **Solving Invariant Generation for Unsolvable Loops**. *29th International Static Analysis Symposium*. **Awarded the Radhia Cousot Young Researcher Best Paper Award**.
- A. Humenberger, D. Amrollahi, N. Bjørner, L. Kovács (2022). **Algebra-Based Reasoning for Loop Synthesis**. *Formal Aspects of Computing*.
- D. Amrollahi, H. Hojjat, P. Rümmer (2023). **An Encoding for CLP Problems in SMT-LIB**. *10th Workshop on Horn Clauses for Verification and Synthesis*.
- D. Amrollahi, E. Bartocci, G. Kenison, L. Kovács, M. Moosbrugger, M. Stankovič (2023). **(Un)Solvable Loop Analysis**. *Submitted to Formal Methods in System Design*.

## RESEARCH EXPERIENCE

- **Research Intern at Automated Program Reasoning Group, TU Wien** Vienna, Austria  
*Under Prof. Laura Kovács and Prof. Ezio Bartocci* 2021/07 - 2022/02 + 2023/05 - 2023/12  
Worked on different topics including polynomial loop invariant generation, program synthesis, symbolic computation, probabilistic programming, saturation-based theorem proving, structural induction, etc.
- **Research Intern at Dependable Systems Lab, EPFL** Lausanne, Switzerland  
*Under Prof. George Candea* 2022/07 - 2022/08  
Integrated Z3's support for quantifiers in first-order logic into KLEE's source code, to mitigate the path explosion issue in symbolic execution due to loops (e.g., libc strings functions), by using loop summaries.
- **Research Intern at Programming Methodology Group, ETH Zürich** Zürich, Switzerland  
*Under Prof. Peter Müller* 2022/03 - 2022/04  
Worked on devising a methodology for verification and specification of Golang programs that use global variables and package initialization code.

## TEACHING EXPERIENCE

- **Teaching Assistant**  
*Department of Electrical and Computer Engineering, University of Tehran*
  - **Advanced Programming.** Fall 2020, Spring 2021, Fall 2021
  - **Data Structures.** Fall 2020
  - **Design and Analysis of Algorithms.** Spring 2021
  - **Discrete Mathematics.** Spring 2020, Fall 2020, Spring 2021
  - **Engineering Probability and Statistics.** Spring 2021
  - **Operating Systems.** Spring 2022, Fall 2022

## HONORS AND AWARDS

- **Radhia Cousot Young Researcher Best Paper Award** 2022/12  
29th Static Analysis Symposium (SAS 2022). Auckland, New Zealand
- **Ranked 8th** in Regional Contest of **ACM-ICPC** West Asia Region, Tehran site. 2020

## PROJECTS

---

- **Vampire** —  [github.com/vprover/vampire/tree/synthesis-recursive](https://github.com/vprover/vampire/tree/synthesis-recursive) *C++*  
Implementing a framework within a saturation-based first-order theorem prover for synthesizing recursive programs using structural induction over algebraic datatypes and superposition calculus.
- **Polar** —  [github.com/probing-lab/polar](https://github.com/probing-lab/polar) *Python, SymPy*  
Implemented a polynomial loop-invariant synthesizer for (probabilistic) unsolvable loops, using recurrences.
- **KLEE with quantifiers** —  [github.com/bolt-perf-contracts/klee/pull/9](https://github.com/bolt-perf-contracts/klee/pull/9) *C++, Z3*  
Integrated Z3's support for existential/universal quantifiers into the KLEE symbolic execution engine codebase to summarize loops using quantified formulas in first-order logic, and mitigate the path explosion problem.

## SKILLS

---

- **Programming Languages:**
  - Experienced in C, C++, Python.
  - Familiar with Scala, Go, Bash.
- **Tools:** Z3, KLEE,  $\text{\LaTeX}$ .
