DANESHVAR AMROLLAHI

<u>daneshvar@cs.stanford.edu</u> <u>⊕</u> <u>cs.stanford.edu/~daneshvar</u> <u>©</u> <u>github.com/daneshvar-amrollahi</u> <u>353 Jane Stanford Way, Gates Computer Science #481, Stanford, CA 94305, United States</u>

EDUCATION

• Stanford University

2024/01 - Present

PhD in Computer Science (Advisor: Clark Barrett)

• University of Tehran

BSc in Computer Engineering (Software)

2018/09 - 2023/02 GPA: 18.02/20.00

RESEARCH INTERESTS

• Automated Reasoning

• Verification

• Satisfiability Modulo Theories (SMT)

• Computer Systems

PUBLICATIONS

- D. Amrollahi, E. Bartocci, G. Kenison, L. Kovács, M. Moosbrugger, M. Stankovič (2022). Solving Invariant Generation for Unsolvable Loops. 29th International Static Analysis Symposium (SAS 2022). Awarded the Radhia Cousot Young Researcher Best Paper Award.
- A. Humenberger, D. Amrollahi, N. Bjørner, L. Kovács (2022). **Algebra-Based Reasoning for Loop Synthesis**. Formal Aspects of Computing (FAC).
- D. Amrollahi, H. Hojjat, P. Rümmer (2023). **An Encoding for CLP Problems in SMT-LIB**. 10th Workshop on Horn Clauses for Verification and Synthesis (HCVS 2023).
- D. Amrollahi, E. Bartocci, G. Kenison, L. Kovács, M. Moosbrugger, M. Stankovič (2023). (Un)Solvable Loop Analysis. Submitted to Formal Methods in System Design (FMSD).
- P. Hozzová, D. Amrollahi, M. Hajdu, L. Kovács, A. Voronkov, E.M. Wagner (2024). Synthesis of Recursive Programs in Saturation. Submitted to International Joint Conference on Automated Reasoning (IJCAR 2024).

RESEARCH EXPERIENCE

• Center for Automated Reasoning, Stanford University Under Prof. Clark Barrett

Stanford, United States
2024/01 - Present

Enhancing the performance robustness of cvc5, an SMT solver, against benchmark scrambling (assertion shuffling, symbol renaming, etc) by adding a new pre-processing pass.

- Research Intern at Automated Program Reasoning Group, TU Wien Vienna, Austria Under Prof. Laura Kovács and Prof. Ezio Bartocci 2021/07 2022/02 + 2023/05 2023/12 Worked on different topics including polynomial loop invariant generation, program synthesis, symbolic computation, probabilistic programming, saturation-based theorem proving, structural induction, etc.
- Research Intern at Dependable Systems Lab, EPFL

 Under Prof. George Candea

 2022/07 2022/08

 Integrated Z3's support for quantifiers in first-order logic into KLEE's source code, to mitigate the path explosion issue in symbolic execution due to loops (e.g., libc strings functions), by using loop summaries.
- Research Intern at Programming Methodology Group, ETH Zürich Zürich, Switzerland Under Prof. Peter Müller 2022/03 2022/04

 Worked on devising a methodology for verification and specification of Golang programs that use global variables and package initialization code, using separation logic.

TEACHING EXPERIENCE

• Teaching Assistant

Department of Electrical and Computer Engineering, University of Tehran

- Advanced Programming.

Fall 2020, Spring 2021, Fall 2021

- Data Structures.

Fall 2020

- Design and Analysis of Algorithms.

Spring 2021

- Discrete Mathematics.

Spring 2020, Fall 2020, Spring 2021

- Engineering Probability and Statistics.

Spring 2021

- Operating Systems.

Spring 2022, Fall 2022

HONORS AND AWARDS

• Stanford School of Engineering (SoE) Fellowship

2024

Awarded a \$12900/quarter stipend and full tuition coverage for one year

Stanford, CA

• Radhia Cousot Young Researcher Best Paper Award 29th Static Analysis Symposium (SAS 2022).

2022/12

Auckland, New Zealand

• Ranked 8th in Regional Contest of ACM-ICPC West Asia Region, Tehran site.

2020

• Summer@EPFL Fellowship

Summer 2022

Ranked top 1.5% among 4000 applicants and awarded a 1600CHF/month fellowship over summer.

PROJECTS

• Vampire — github.com/vprover/vampire/tree/synthesis-recursive

C++

Implemented a framework within a saturation-based first-order theorem prover for synthesizing recursive programs using structural induction over algebraic datatypes, and superposition calculus.

• Polar — github.com/probing-lab/polar

Python, SymPy

Implemented a polynomial loop-invariant synthesizer for (probabilistic) unsolvable loops, using recurrences.

• KLEE with quantifiers — github.com/bolt-perf-contracts/klee/pull/9

C++. Z3 Integrated Z3's support for existential/universal quantifiers into the KLEE symbolic execution engine codebase to summarize loops using quantified formulas in first-order logic, and mitigate the path explosion problem.

• Koloocheh — 🞧 github.com/daneshvar-amrollahi/Koloocheh

Python, qRPC

A peer-to-peer file-sharing system employs the flooding algorithm for search operations and ensures a small graph diameter by leveraging random graph properties.

SKILLS

• Programming Languages:

- Experienced in C, C++, Python.
- Familiar with Scala, Go, Bash.
- Tools: cvc5, Z3, KLEE, LATEX.
