DANESHVAR AMROLLAHI

✉ daneshvar.amrollahi@stanford.edu 🌐 daneshvar-amrollahi.github.io ⬤ github.com/daneshvar-amrollahi

EDUCATION

- **Stanford University** *2024/01 - 2030/01 (Expected)*
  PhD in Computer Science

- **University of Tehran** *2018/09 - 2023/02*
  BSc in Computer Engineering *GPA: 18.02/20.00*

PUBLICATIONS

- D. Amrollahi, E. Bartocci, G. Kenison, L. Kovács, M. Moosbrugger, M. Stankovič (2022). **Solving Invariant Generation for Unsolvable Loops**. *29th International Static Analysis Symposium*. **Awarded the Radhia Cousot Young Researcher Best Paper Award.**

- A. Humenberger, D. Amrollahi, N. Bjørner, L. Kovács (2022). **Algebra-Based Reasoning for Loop Synthesis**. *Formal Aspects of Computing*.

- D. Amrollahi, H. Hojjat, P. Rümmer (2023). **An Encoding for CLP Problems in SMT-LIB**. *10th Workshop on Horn Clauses for Verification and Synthesis*.

- D. Amrollahi, E. Bartocci, G. Kenison, L. Kovács, M. Moosbrugger, M. Stankovič (2023). **(Un)Solvable Loop Analysis**. *Submitted to Formal Methods in System Design*.

RESEARCH EXPERIENCE

- **Research Intern at Automated Program Reasoning Group, TU Wien** *Vienna, Austria*
  Under Prof. Laura Kovács and Prof. Ezio Bartocci *2021/07 - 2022/02 + 2023/05 - 2023/12*
  Worked on different topics including polynomial loop invariant generation, program synthesis, symbolic computation, probabilistic programming, saturation-based theorem proving, structural induction, etc.

- **Research Intern at Dependable Systems Lab, EPFL** *Lausanne, Switzerland*
  Under Prof. George Candea *2022/07 - 2022/08*
  Integrated Z3's support for quantifiers in first-order logic into KLEE's source code, to mitigate the path explosion issue in symbolic execution due to loops (e.g., libc strings functions), by using loop summaries.

- **Research Intern at Programming Methodology Group, ETH Zürich** *Zürich, Switzerland*
  Under Prof. Peter Müller *2022/03 - 2022/04*
  Worked on devising a methodology for verification and specification of Golang programs that use global variables and package initialization code.

TEACHING EXPERIENCE

- **Teaching Assistant**
  Department of Electrical and Computer Engineering, University of Tehran

  - **Advanced Programming**. *Fall 2020, Spring 2021, Fall 2021*
  - **Data Structures**. *Fall 2020*
  - **Design and Analysis of Algorithms**. *Spring 2021*
  - **Discrete Mathematics**. *Spring 2020, Fall 2020, Spring 2021*
  - **Engineering Probability and Statistics**. *Spring 2021*
  - **Operating Systems**. *Spring 2022, Fall 2022*

HONORS AND AWARDS

- **Radhia Cousot Young Researcher Best Paper Award** *2022/12*
  29th Static Analysis Symposium (SAS 2022). *Auckland, New Zealand*

- **Ranked 8th** in Regional Contest of **ACM-ICPC** West Asia Region, Tehran site. *2020*

PROJECTS

- **Vampire** — ⬡ github.com/vprover/vampire/tree/synthesis-recursive   *C++*
  Implementing a framework within a saturation-based first-order theorem prover for synthesizing recursive programs using structural induction over algebraic datatypes and superposition calculus.

- **Polar** — ⬡ github.com/probing-lab/polar   *Python, SymPy*
  Implemented a polynomial loop-invariant synthesizer for (probabilistic) unsolvable loops, using recurrences.

- **KLEE with quantifiers** — ⬡ github.com/bolt-perf-contracts/klee/pull/9   *C++, Z3*
  Integrated Z3's support for existential/universal quantifiers into the KLEE symbolic execution engine codebase to summarize loops using quantified formulas in first-order logic, and mitigate the path explosion problem.
